Video Demonstrations

Talk Overview

- ▶ Introduction.
- ▶ Contents of a Video Demonstration.
- ▶ Recording a Video Demonstration.
- ▶ Example.
- ▶ Submitting a Video Demonstration.

INTRODUCTION

Marking Web Applications

- ▶ In my modules you develop complex web applications with a front end, server, and data storage.
- ▶ To mark web applications, teachers have to see them running.
- ▶ Staff do not have time to try to get each student's project working.
- ▶ In many cases, the web application cannot be run – for example, if the student does not submit the database dump.
- ▶ Prototype code often only works under highly specific conditions, which staff do not know about.
- ▶ Even if staff could get the web applications running, their functionality is unlikely to be shown to best advantage.

Demonstrations

- ▶ For these reasons, prior to the pandemic, demonstrations were a mandatory part of the assessment process.
- ▶ During the demonstration:
 - ▶ Students showed the functionality of their web application.
 - ▶ Staff marked the functionality as it was demonstrated.
 - ▶ Staff asked questions – for example, raising plagiarism issues, checking that students understood their own code.
 - ▶ Immediate feedback was given to students.

Video Demonstrations during Pandemic

- ▶ It is not practical to do online demonstrations for 20-25 students in a single laboratory session over Zoom.
- ▶ So for **individual** coursework the live demonstration has been replaced by a video demonstration.
- ▶ Group coursework will still have a live online demonstration via Zoom at which all group members are expected to be present.

Video Demonstrations

- ▶ Coursework cannot be accurately marked without a demonstration.
- ▶ So video demonstrations are **mandatory** for **final submissions** of individual coursework.
- ▶ **Your final submissions of individual coursework will receive zero marks if you do not upload a video demonstration.**

Technology Demonstrations

- ▶ If you work in technology, you will often give demonstrations to your manager or clients.
- ▶ A promotions or the success of the company could depend on a successful demonstration.
- ▶ Demonstrations are a useful skill – a good idea to practice now!

CONTENTS OF A VIDEO DEMONSTRATION

Contents of a Video Demonstration

- ▶ The aim of a video demonstration is to show the teacher how your project fulfils the marking criteria.
- ▶ If you don't show a particular feature working, the teacher cannot give you credit for that feature – at most they can give you marks for an attempt.
- ▶ Staff have a lot of marking: If your video is too long, they will not have time to watch all of it.

Contents of a Video Demonstration

- ▶ The teacher has your code and your report.
- ▶ **There is no need to discuss code or your report in the video demonstration.**
- ▶ Focus on the working functionality of your website – the parts that the teacher cannot see for themselves without running your web application.

Contents of a Video Demonstration

- ▶ **Your video demonstration should be:**
 - ▶ As short as possible (but not too short).
 - ▶ As clear as possible.
 - ▶ Completely focused on explaining to the teacher why your project should get marks for particular features.

Bugs

- ▶ Your code will have bugs
- ▶ For example, it might not trigger the password validation if you forget to enter the email address.
- ▶ I strongly recommend that you **practice** your demonstration before you record it so that your system is shown to its best advantage.
- ▶ Of course, we will still check your code and may run it!

Recommended Structure

- ▶ Introduce yourself by clearly stating your name.
- ▶ (Don't include your student email address or ID in videos that you upload to YouTube).
- ▶ State what you are demonstrating.
- ▶ Go through each marking criteria that is concerned with working functionality – for example, registration, login, game, etc.
- ▶ Clearly demonstrate the functionality – for example, register a user and demonstrate that the data is stored (in local storage or database).
- ▶ Use the marking criteria as a guide for your demonstration.
- ▶ An example is given later in this talk.

Recommended Structure

- ▶ Don't make claims about how many marks you should receive – we will make our own minds up about this!
- ▶ Do not discuss:
 - ▶ Code.
 - ▶ Attractiveness of front end.
 - ▶ Report.

Recommended Length

- ▶ Your video demonstration should be approximately 5 minutes long.
- ▶ This is plenty of time if you practice your demonstration and only show working functionality.
- ▶ The staff marking your project will not spend more than 5 minutes watching your video.
- ▶ Longer videos are likely to be longer than 100mb, so you will have to mess around uploading them to YouTube.

Practice Before Recording

- ▶ You must practice your demonstration before recording it.
- ▶ You need to learn how to work around the limitations of your system and show it to best advantage.
- ▶ This will enable you to present your project in a professional manner.
- ▶ Will help you to keep your presentation within the time limit.
- ▶ You should also watch your presentation before you submit it to check that the video works and that you are happy with it.
- ▶ **Don't record demonstration 5 minutes before the deadline!**

RECORDING A VIDEO DEMONSTRATION

Recording a Video Demonstration

- ▶ Record your video demonstration with a desktop screen recorder. (Don't point your phone at the screen!)
- ▶ A desktop screen recorder records your screen and audio and saves them to a video file.
- ▶ I recommend that you use OBS Studio:
 - ▶ Free
 - ▶ Stable
 - ▶ Flexible
 - ▶ Works on all operating systems.
- ▶ Available at: <https://obsproject.com/>
- ▶ I use OBS Studio to record all of my lectures.

Video File Size

- ▶ The size of a video file is a combination of two factors:
 - ▶ **Resolution.** Number of pixels in each frame of video.
 - ▶ **Bitrate.** Amount of compression.
- ▶ When I record my lectures I use:
 - ▶ **Resolution:** 1280 x 1024.
 - ▶ **Bitrate:** 2500 Kbps.
- ▶ This provides decent quality and a reasonable file size (approximately 20mb for 5 minutes).

Video Format

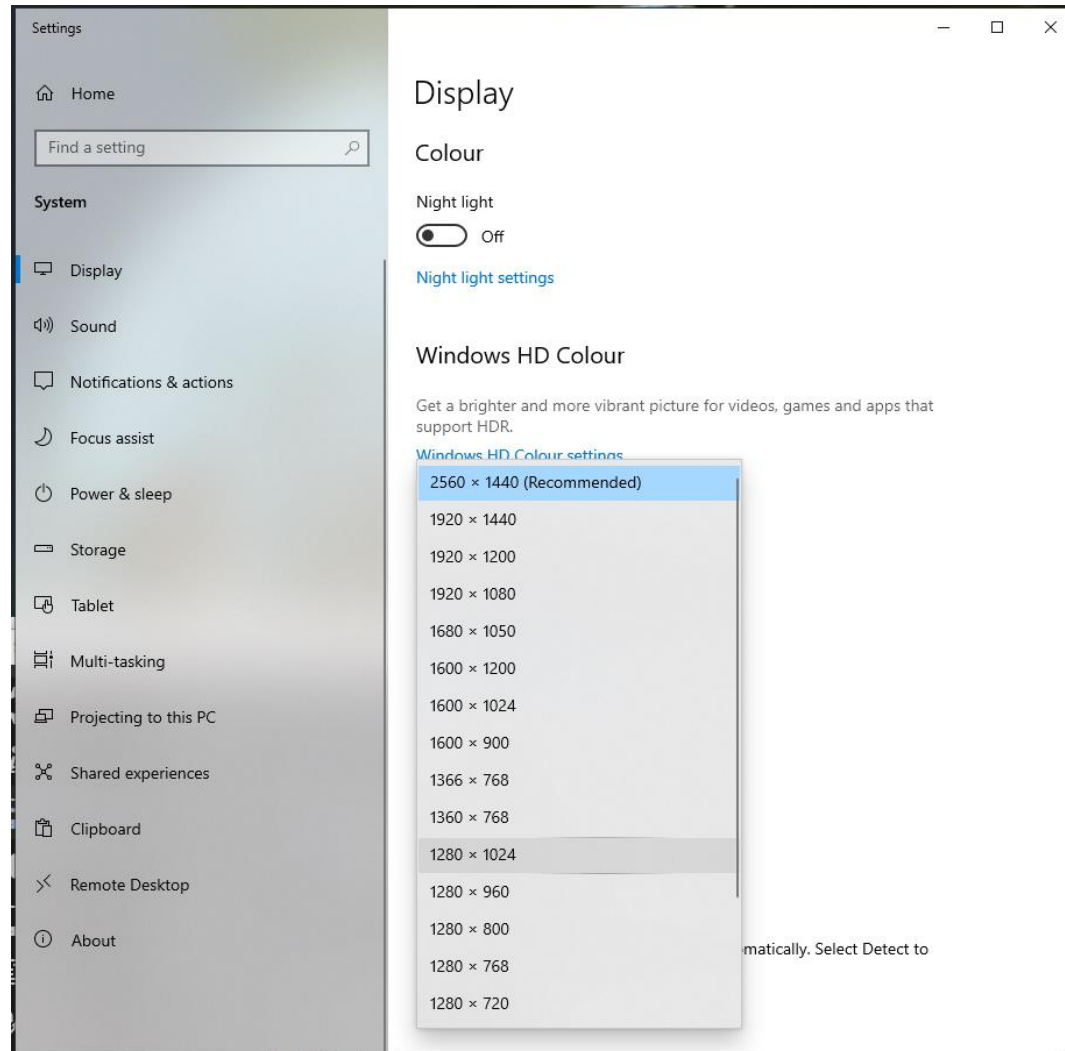

- ▶ Your video demonstration must be playable on the VLC player: <https://www.videolan.org/vlc/index.en-GB.html>.
- ▶ Zero marks will be given to videos that do not play on this player.
- ▶ **To ensure that your video demonstration can be played, I strongly recommend that you record it in MP4 format.**

Reduce Screen Resolution

- ▶ If you are working on a high resolution display, you can reduce the screen resolution to reduce the file size of your video demonstration.
- ▶ Alternatively, you can scale down the video resolution in OBS studio.
- ▶ In Windows, right click the desktop and select Display Settings.

Set Screen Resolution

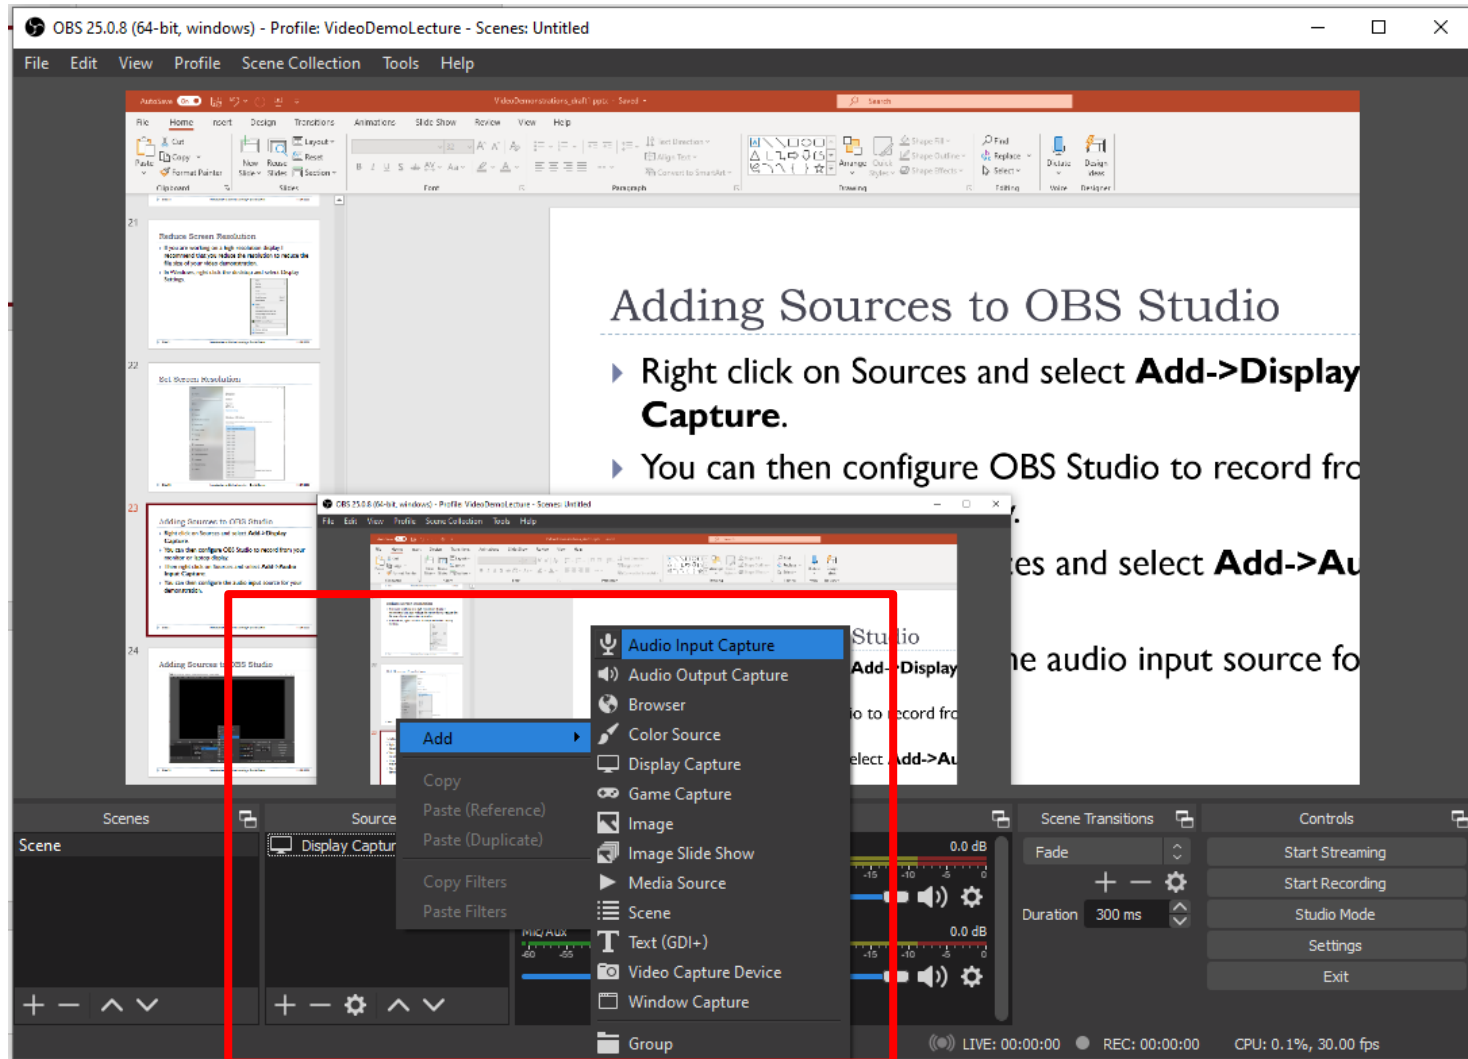

Adding Sources to OBS Studio

- ▶ Before you record, you need to configure the sources in OBS Studio.
- ▶ Right click on **Sources** and select **Add->Display Capture**.
- ▶ You can then configure OBS Studio to record from your monitor or laptop display.
- ▶ Right click on **Sources** and select **Add->Audio Input Capture**.
- ▶ You can then configure the audio input source for your demonstration.

Adding Display Capture to OBS Studio

Adding Audio Source to OBS Studio

Configuration

- ▶ Click on Settings to set:
 - ▶ Location where video is stored.
 - ▶ Video resolution.
 - ▶ Video quality and bitrate.
 - ▶ Video format.

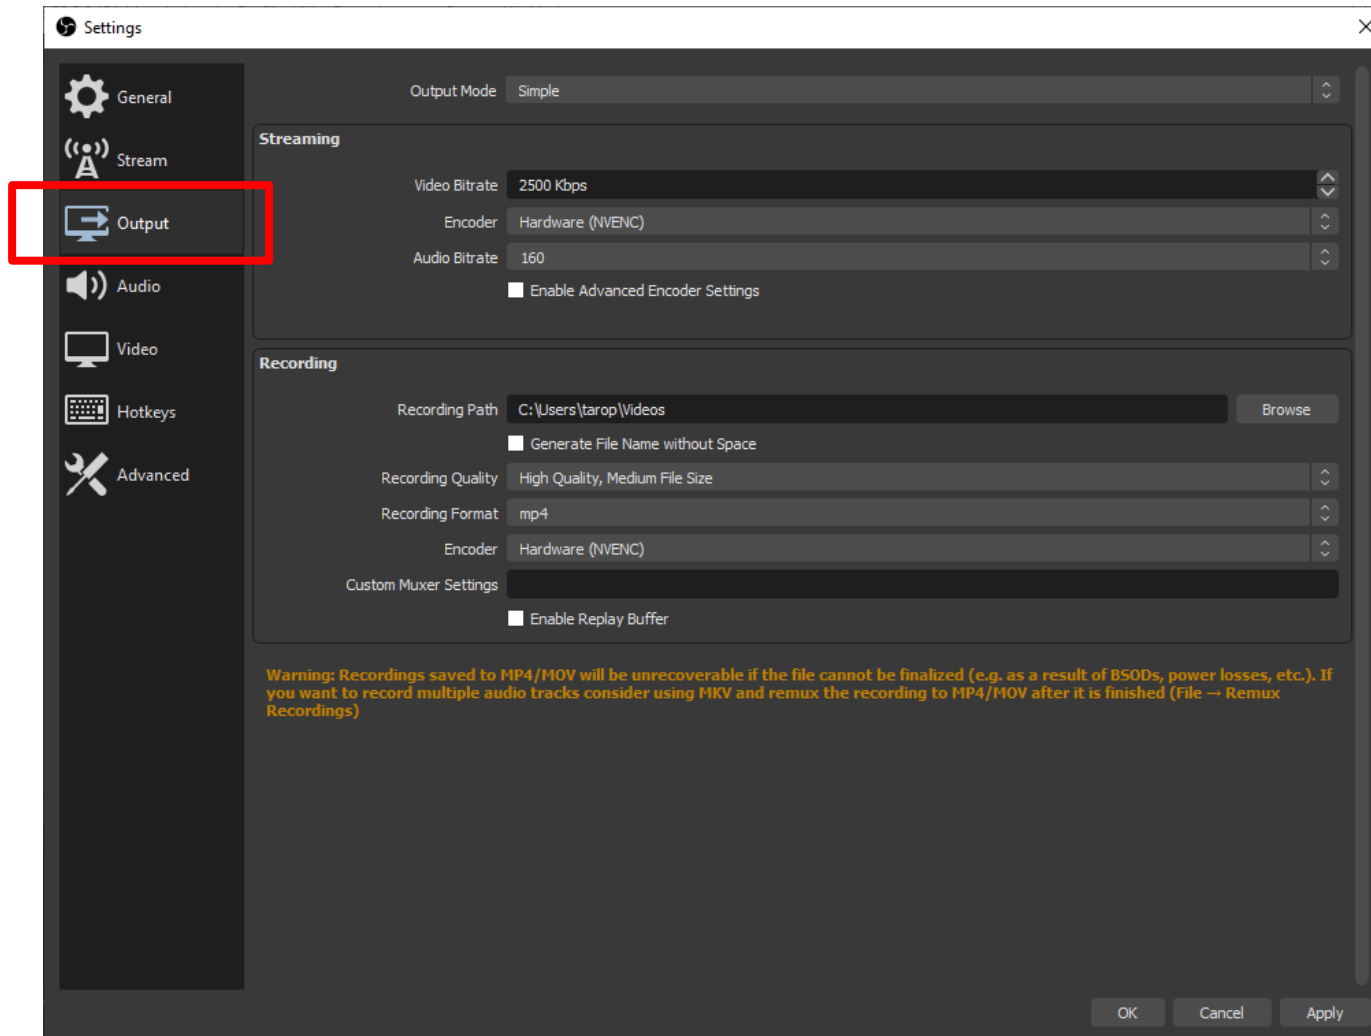

Video Setting

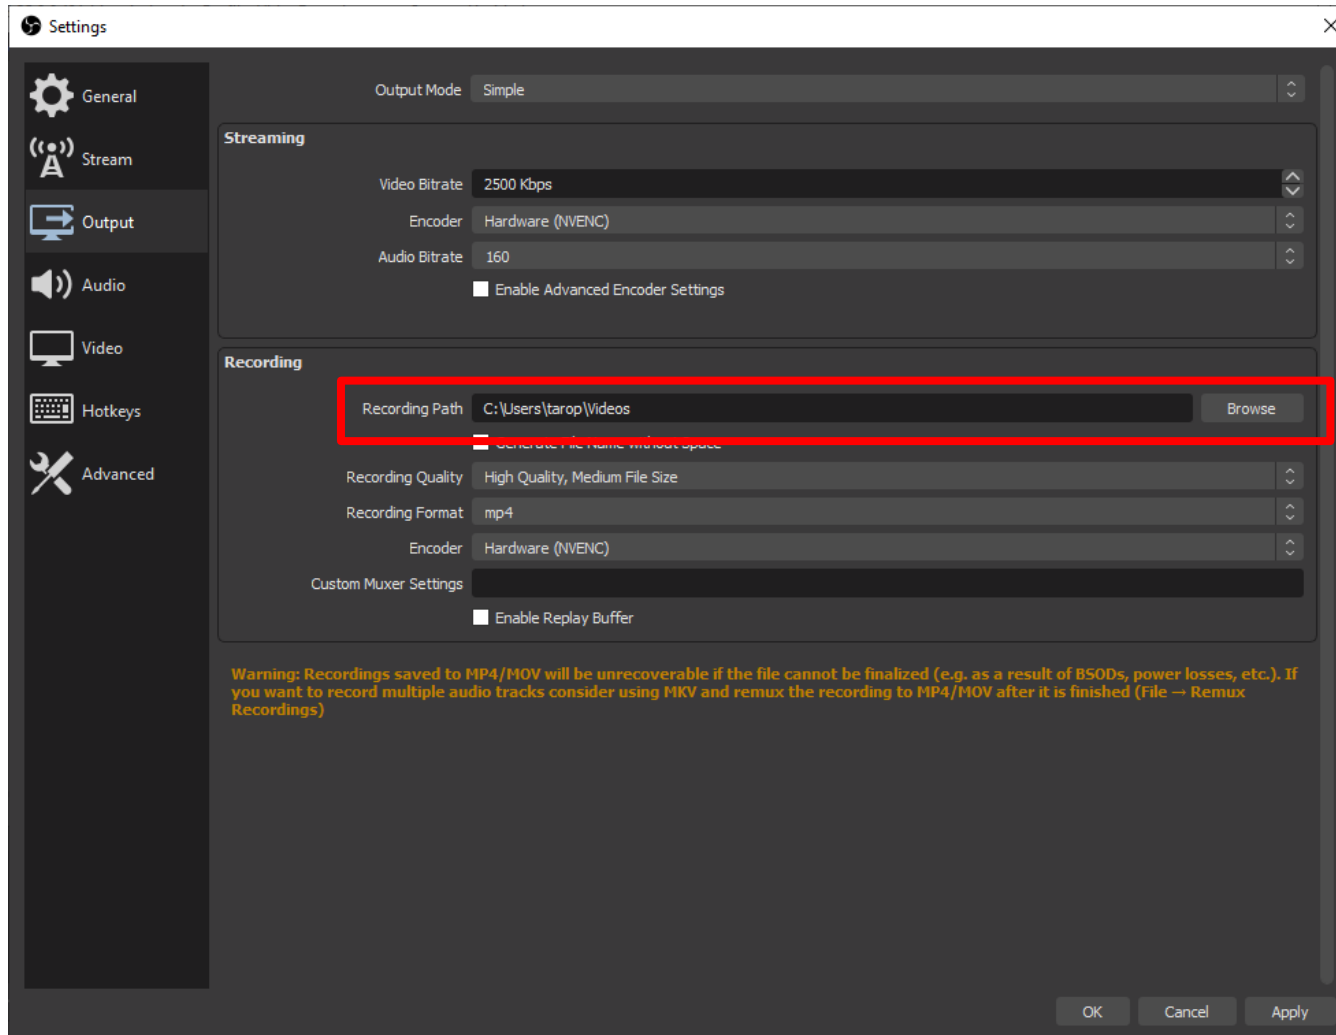

Video Setting

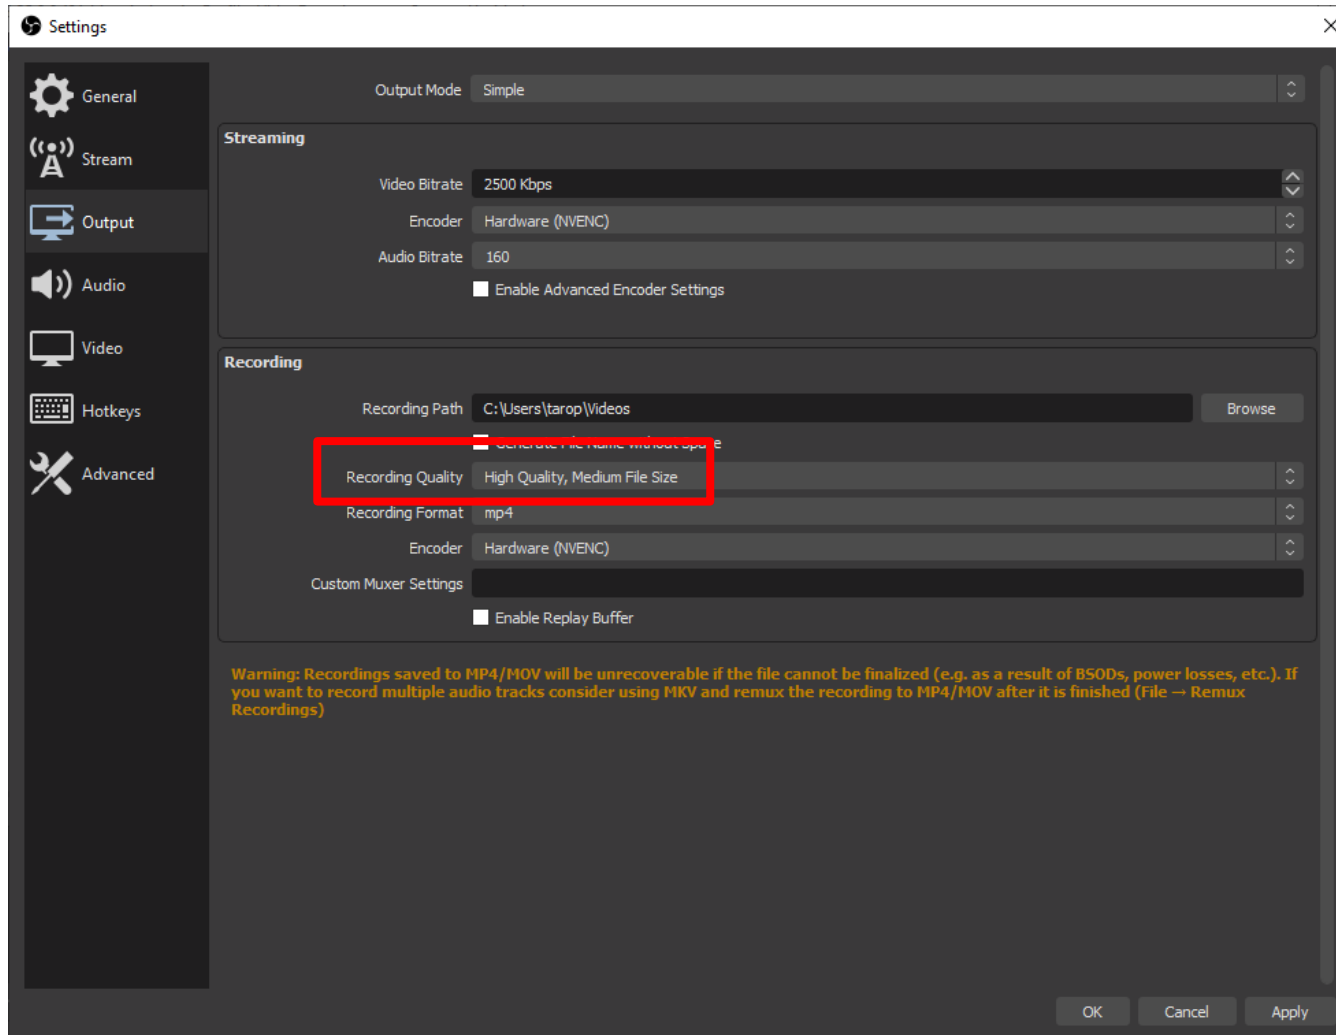

Output Settings

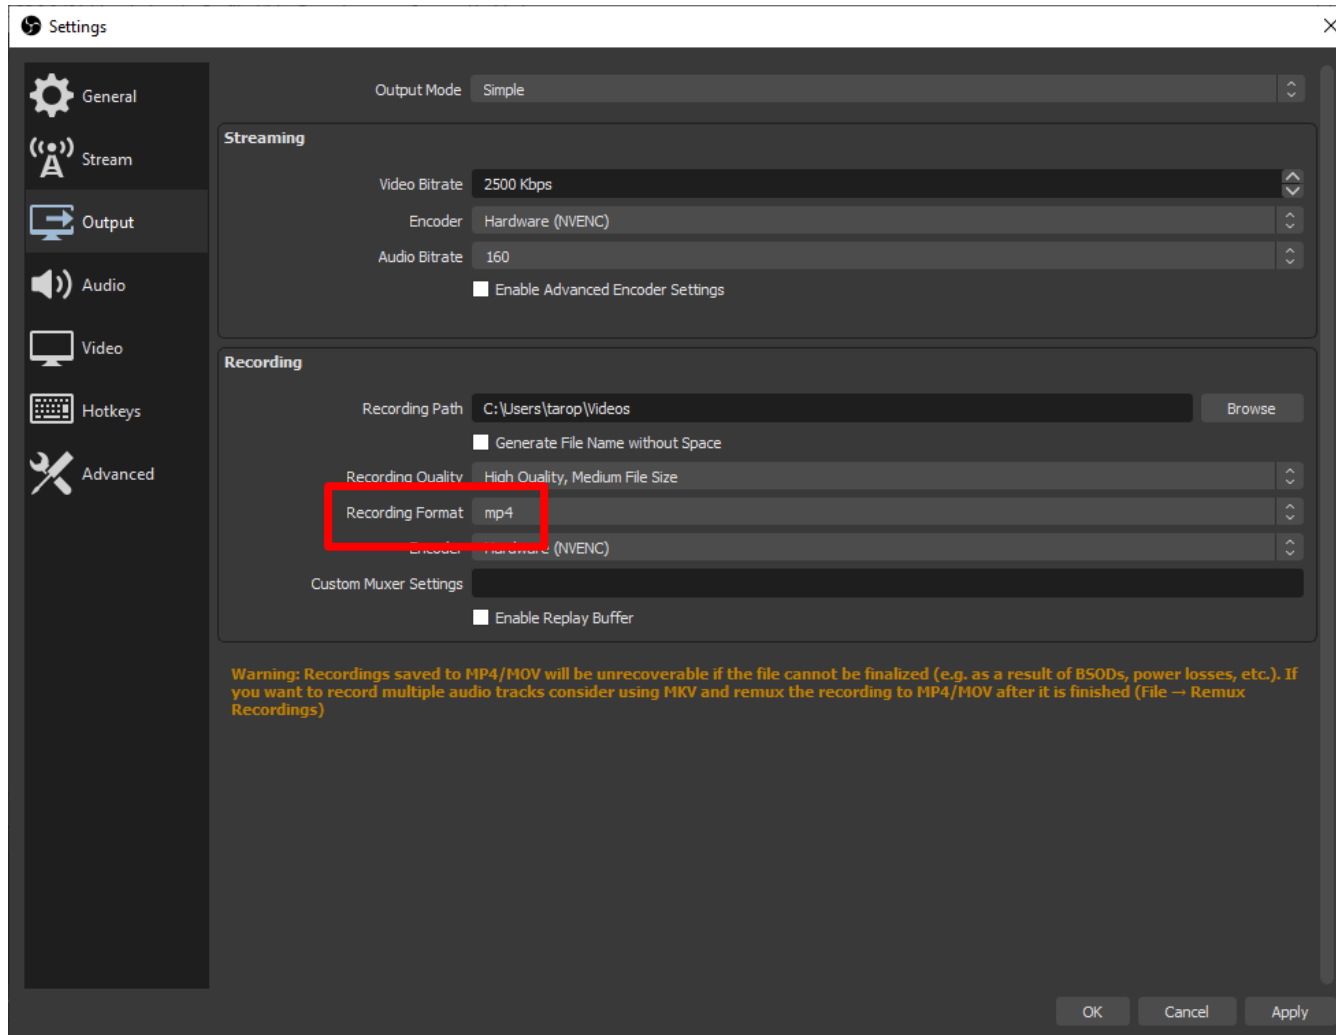

Output Settings

Output Settings

Output Settings

Recording

- ▶ Click 'Start Recording' to record your video.
- ▶ Do a test run to make sure that the sound is audible and the video is ok.
- ▶ Then you are ready to record your video demonstration.

EXAMPLE

Example

- ▶ I will now show you an example video demonstration.
- ▶ This was recorded for the first piece of coursework on my second year module.
- ▶ Same principles apply to all video demonstrations.

SUBMITTING A VIDEO DEMONSTRATION

Submitting a Video Demonstration

- ▶ The maximum size for a submission on MyLearning is 100mb.
- ▶ If your total file size (code, report, video demonstration, database dump) is less than 100mb, zip up the video with the rest of your submission and upload it.
- ▶ (Make sure that you remove third party libraries, such as node_modules folder and jar files).
- ▶ If your total file size is greater than 100mb, upload the video to YouTube and include a link to the video in your project report.

SUMMARY

Summary

- ▶ Video demonstrations are mandatory for final submissions of individual coursework: **No video demonstration, no mark.**
- ▶ This video has explained how to record video demonstrations for my modules.
- ▶ Technology demonstrations are a useful skill because they are common practice in most technology jobs.
